

Plug2Sync

from 4Team[®] Corporation

Product introduction

Sync as easy as you plug

The only automated instant synchronization for files and Microsoft Outlook data via external USB drive

Files and Microsoft® Outlook® personal synchronization and backup software

- [Designed for external USB](#) storage devices in mind
- [Extremely easy to use](#)
- [Instant synchronization](#)
- Compatible with Windows® 7 and Office 2010
- [From a Microsoft® Certified](#) Company
- [Designed and Aggressively Priced for OEMs](#)

Designed for external USB storage devices in mind

- Portable* application
- Any USB storage device
- Removable drive auto detection
- Optimized for slow USB flash memory's random write speed
- Anti-virus friendly

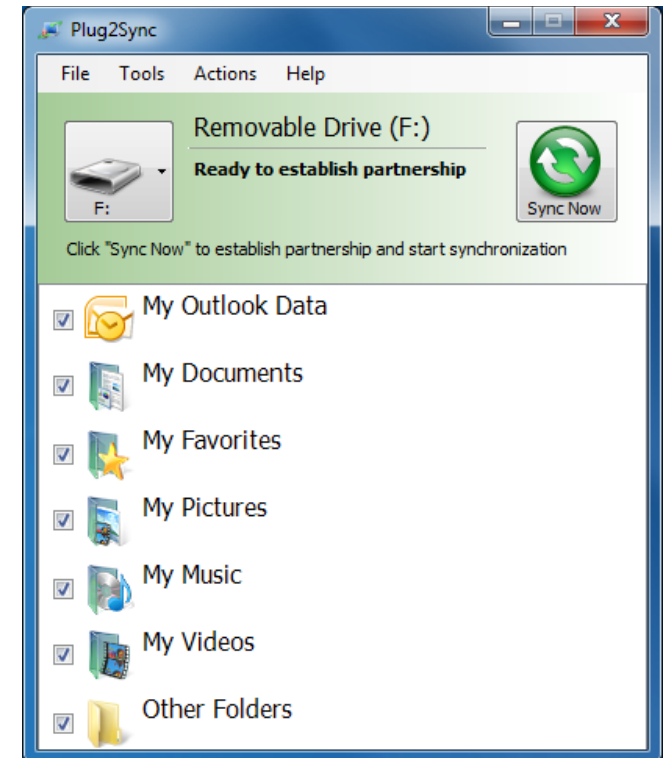

*Current version is non-portable, portable version can be delivered by request. Please [contact us](#).

Plug2Sync – easy to install and use

- Simple and recognizable interface (UI); ActiveSync® - like
- Portable and fully automated
- Low system requirements
- No complicated dialogs or Wizards.
- Simple Licensing per device. Sync as many PCs as you want.
- Sync as easy as you plug™. Bidirectional synchronization on connect. Removable storage will be detected automatically as soon as you plug it in.
- USB Drive is ready to go. [Instant sync](#) on event.
- Quick sync*. Only changes are synchronized.
- Works directly with MAPI without interfering with Microsoft Outlook. There are no add-ons/plugin-ins to install.
- Synchronized data and files are ready to be opened in the native application from the USB device.

*The actual synchronization time will depend on the size of the synchronized folders and on the speed of the external device.

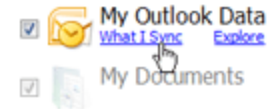

Instant synchronization

- No waiting for any scheduled or manual backup or synchronization to end - just safely remove your external drive and go.
- Event-based synchronization, only changes are transferred to the external backup drive to minimize sync time. The sync is performed automatically as soon as files or Microsoft Outlook items are updated.

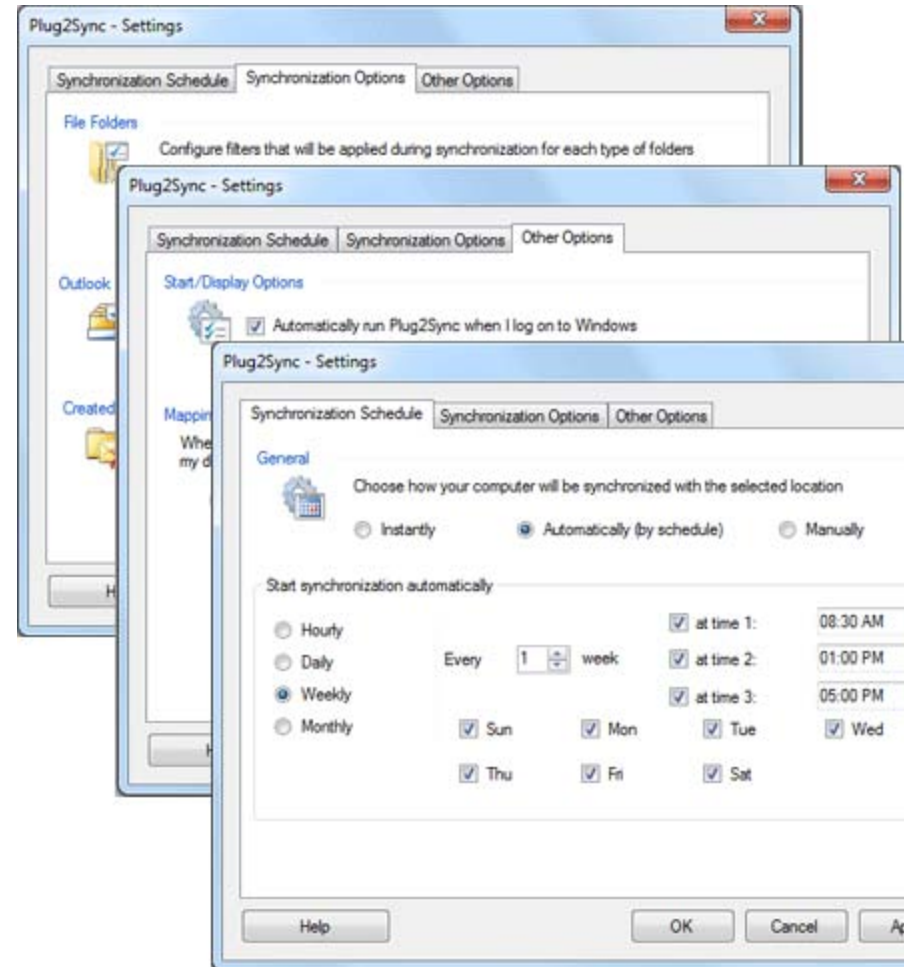

Advanced features

- **Select and synchronize only data that the end-user wants.**
- **Simple connected devices management**
- **Assigned external drives.** Synchronization settings are assigned to each drive, which makes it easy to synchronize different groups of PCs with different sets of folders, schedules, filters, and other settings.
- **Instant, scheduled or manual automatic background files and Microsoft Outlook synchronization** even if Outlook is not running.
- **Synchronize any selected or all of the Outlook Personal Folders and all Outlook items fields.**
- **Synchronization data across different Microsoft Outlook versions** (Outlook® 2002, 2003, 2007, 2010).
- **"Read"/"Unread" status synchronization is supported.** End-user can synchronize e-mails and see whether he has already read the message or not.
- **Label (color) synchronization in Outlook Calendar.**
- **Synchronization of Master list Categories and individual Categories.**
- **Intelligent conflict and duplicate detection and management!**
